Examiner's Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

Referring to claims 1-26, the prior art searched and of record neither anticipates nor suggests in the claimed combinations, selecting a set of screens having fundamental frequency vectors that combine to yield only Moiré frequency vectors, a dot screen and a line screen being selected from this set of screens in association with respective color separations

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Cited Art

The art made of record and not relied upon is considered pertinent to applicant's disclosure.

Delabastita (US 5155599 A) discloses use of screening angles that are close, but not identical to conventional screening angles whereby reproduction is Moiré free since the deviations in angles from the conventional system are exactly offset by the deviations in line rulings. The screening system is particularly advantageous when used for combinations of screens with rational tangent angles. The Moiré free combination of rational tangent screens can be rotated by a constant angle with the amount of rotation controlled in small increments.

Inoue (US 6641241 B2) discloses halftone screen periods and screen angles of three color images that are set such that a period and an angle of a primary Moiré pattern produced when two of the three color images are superposed are substantially equal to a halftone screen period and a screen angle of the remaining one of the three color images.
